

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	6ab221fbe880316a482c6241
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team gathering	Team members meet online or in person and agree on the roles: facilitator, note taker and ideators.
Set the goal	Find the best way to restrict record access so that only EEE branch users can view the records.
Problem statement	How might we restrict record access in ServiceNow so that only users of the EEE branch can view the EEE records?
Time to prepare	10 minutes to prepare, 1 hour to collaborate, 2-8 people recommended.

Key rules of brainstorming

Stay in topic	Encourage wild ideas
Defer judgment	Listen to others
Go for volume	If possible, be visual

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm: each team member writes down as many ideas as possible for the problem statement.

Person 1	Use role-based ACL only	Script-controlled ACL that checks the user's branch	Create a separate table for each branch
Person 2	Hide records with a UI policy	Before-query business rule to filter records	
Person 3	Domain separation for each branch	Group-based ACL condition for EEE	
Person 4	Reusable Script Include for the branch check	Log and notify on denied access	

Group ideas: similar ideas are grouped under a theme.

Access control rules	Data separation	Filtering and UI	Support and reuse
Role-based ACL only	Separate table per branch	UI policy to hide records	Reusable Script Include
Script-controlled ACL on branch	Domain separation	Before-query business rule	Log and notify on denied access
Group-based ACL condition			

Step-3: Idea Prioritization

Ideas are placed on a grid by how important they are and how feasible they are. Ideas in the top-right area are taken forward.

No.	Idea	Feasibility	Importance
1	Role-based ACL only	High	Low
2	Script-controlled ACL that checks the user's branch	High	High
3	Separate table for each branch	Medium	Low
4	UI policy to hide records	High	Low
5	Before-query business rule	Medium	Medium
6	Domain separation	Low	High
7	Group-based ACL condition	High	High
8	Reusable Script Include for the branch check	High	High
9	Log and notify on denied access	Medium	Medium

Selected idea: Idea 2 (script-controlled ACL that checks the user's branch), supported by Idea 7 (group-based condition) and Idea 8 (reusable Script Include).
