

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	6ab221fbe880316a482c6241
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Access Control Setup	Create the records table with a Branch field Create the EEE group and add EEE branch users Load sample records for the EEE branch and other branches
FR-2	ACL Configuration	Create a read ACL on the records table Write the ACL script to check whether the user belongs to the EEE branch Allow the admin role to bypass the branch check
FR-3	Record Access Enforcement	EEE branch users can view the records Users outside the EEE branch cannot view the records The same rule applies to list, form and API access
FR-4	Testing and Deployment	Test by impersonating an EEE user, a non-EEE user and an admin Capture the changes in an Update Set and deploy it

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The rule works in the background. Users open the list or form as usual and see only the records they are allowed to see.
NFR-2	Security	Only EEE branch members and admins can view the records. The script denies access by default (answer = false) unless the condition is met.
NFR-3	Reliability	The ACL gives the same result every time for the same user and record, and handles users with no group or branch without errors.
NFR-4	Performance	The ACL script is short and uses a single group check without extra database queries, so lists and forms load without delay.
NFR-5	Availability	The solution runs on the ServiceNow cloud platform, so it is available whenever the instance is available.
NFR-6	Scalability	The same ACL pattern can be extended to other branches, tables and operations by changing the condition in the script.
