Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1 Mark

Communication Plan: Script-Controlled ACL – Restrict Record Access Based on Field Value

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with external stakeholders, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Stand-up	Daily	Google Meet / WhatsApp	All team members	Share daily progress and plan tasks for the ACL implementation.
2	Progress Update	Weekly	Microsoft Teams	Team members and mentor	Review completed work on the script-controlled ACL and update the task status.
3	Issue / Bug Discussion	As Needed	WhatsApp / Google Meet	Team members	Discuss and fix ACL script errors and access-related issues quickly.
4	Stakeholder Review	Bi-Weekly	Email / Microsoft Teams	Team members and mentor / reviewer	Present progress and collect feedback on the ACL solution.
5	Final Demo Rehearsal	Once	Google Meet	All team members	Practice the final demonstration and verify the ACL behaviour with different users.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	ACL restriction was not applying to some users because of conflicting or overlapping ACL rules.	Reviewed the ACL evaluation order, removed the conflicting rule, and re-tested using impersonation.
2	ACL script returned the wrong result for certain field values, blocking authorized users.	Corrected the script logic to check the field value and user role, and set answer = true or false explicitly.
3	Difficulty coordinating work and sharing updates among team members.	Fixed a daily stand-up time and used a common group chat to share updates and track tasks.
