Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1 Mark

Demonstration of Proposed Features: Script-Controlled ACL – Restrict Record Access Based on Field Value

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Custom ACL Creation	Created a record-level ACL of type "record" for the Read operation on the target table.	Implemented	Yes	Created after elevating to the security_admin role.
2	Script-Based Condition	The ACL script checks the value of current.<field> and returns answer = true or false.	Implemented	Yes	Script used instead of the condition builder.
3	Field Value-Based Record Restriction	Access is blocked for records where the chosen field holds a specific value (e.g., State = Closed).	Implemented	Yes	All other records remain accessible.
4	Role-Based Access Control	Only users with the authorized role can view the restricted records; all other users are denied.	Implemented	Yes	Role assigned in the ACL.
5	Unauthorized Access Handling	Users without access cannot see restricted records in the list or form view.	Implemented	Yes	Records hidden / access denied message shown.
6	Testing via Impersonation	Impersonated different users to verify the ACL behaves correctly.	Implemented	Yes	Compared admin vs. normal user results.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
