

Code-Layout, Readability and Reusability

Date	29 Sept 2026
Team ID	6ab221fbe880316a482c6241
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	ACL script is indented uniformly with 4 spaces inside the if/else blocks.
2	Proper File Structure	Files and folders are logically organized	Yes	The ACL, roles and test records are grouped by table, and the update set is named clearly.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Names like answer, isOwner, userRole and fieldValue are used.
4	Function / Method Names	Functions are descriptively named	Yes	Names like checkFieldAccess() and hasRequiredRole() make the purpose clear.
5	Code Comments	Inline and block comments explain logic	Yes	A block comment at the top explains the ACL, and inline comments explain each condition.
6	Modular Design	Code is split into reusable functions/modules	Partial	The role check is separated into a Script Include; the field-value condition is still inside the ACL script.
7	No Redundant Code	Duplicate or unused code is removed	Yes	Unused debug statements and duplicate conditions were removed.
8	Error Handling	Exceptions and errors are handled gracefully	Yes	Null and empty field values are checked, and access is denied by default (answer = false).

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	ACLUtills Script Include (role and field-value check)	JavaScript (ServiceNow)	Incident, Task and custom table ACLs	High
2	Field Value Condition Function	JavaScript (ServiceNow)	Read and Write ACLs on the same table	High
3	Role-based Access Check	ServiceNow Roles / ACL	Multiple tables and fields	Medium

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
4	Test Records / Test Users Setup	ServiceNow Impersonation	Testing other ACL rules	Medium
5	Update Set (ACL configuration)	ServiceNow Update Set	Moving from Dev to Test/Prod instances	Low

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Clean indentation and a logical structure; the ACL is easy to follow.
Readability	5	Meaningful names and comments make the logic easy to understand.
Reusability	4	Script Include can be reused across tables, but some logic is still inside the ACL.
Documentation / Comments	4	Header and inline comments are present; a short README could still be added.
Overall Score	4.5 / 5	Well-organized, readable and maintainable, with small room to make it more modular.
