Maximum Marks	

Functional & Performance Testing

Project: Script-Controlled ACL – Restrict Record Access Based on Field Value

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	EEE Branch User Access	Log in as a user from the EEE branch and open the restricted record	Record is visible to the user		
FT-02	Other Branch User Access	Log in as a user from a different branch and open the same record	Access is denied; record is not displayed		
FT-03	Field Value Check	Change the Branch field value on the record and reopen it as the same user	Access changes according to the new field value		
FT-04	ACL Script Validation	Open the ACL, check that it is active and save the script	Script saves without errors and ACL is active		
PT-01	Record Load Time	Use a timer to check how long the record takes to open	Should be under 3 seconds		
PT-02	Multiple Users Access	Open the record with several users at the same time	ACL evaluates correctly without slowing down		
PT-03	List View Load Test	Open a list with many records as an EEE user and a non-EEE user	List loads smoothly and shows only permitted records
