

Performance Testing

Date	28 Sept 2026
Team ID	6ab221fbe880316a482c6241
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Apache JMeter (Postman Collection Runner can also be used)
Type of Testing	Load Testing
Target Module / API	ServiceNow Table API (/api/now/table/<table_name>) with the script-controlled ACL applied
Test Environment	Hosted Server (ServiceNow Personal Developer Instance)
Test Date	[Enter the date you ran the test]

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User without the required role requests a record whose field has the restricted value	5	60	Access denied (no record data returned) and response is fast
2	User with the required role requests a record whose field has the restricted value	5	60	Record is returned successfully
3	Mixed load: authorized and unauthorized users request records with different field values	10	120	Correct allow/deny for every request, average response < 2 sec
4	Peak load: many users request records at the same time	25	120	ACL is still enforced correctly, no unauthorized data returned, error rate < 1%

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	[Fill after test]	[Fill after test]	[Fill after test]
2	Response Time (Max)	< 5 seconds	[Fill after test]	[Fill after test]	[Fill after test]
3	Throughput (Req/sec)	≥ 5 req/sec	[Fill after test]	[Fill after test]	[Fill after test]

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
4	Error Rate	< 1%	[Fill after test]	[Fill after test]	Expected 403 (access denied) responses are not counted as errors.
5	CPU Utilization	< 80%	[Fill after test]	[Fill after test]	[Fill after test]
6	Memory Utilization	< 80%	[Fill after test]	[Fill after test]	[Fill after test]

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance, for example: average response time stayed within the target and the ACL blocked every unauthorized request correctly.]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing, for example: slower response when the ACL script runs a GlideRecord query for every record.]

Optimization Steps Taken:

[Describe any changes made to improve performance, for example: moved the role check to a Script Include and avoided extra database queries inside the ACL script.]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below
